

Orthodontic Management of Gummy Smile

2 Days Advanced Course with a **DAMON ULTIMA** Hands-On + TADS Hands-On

1st-2nd of **Dec 2023**
Dublin-Ireland

Presented By
DR. BADER BORGAN

BDS, MSc, Morth RCSEd,
Specialist Orthodontist

Orthodontic **non-surgical** correction of gummy smiles can be one of the most rewarding treatments at the orthodontic practice, it is a **life changing experience** for the patients. Those patients were usually told that the only Treatment is a major surgery, and they "went on" for years trying to hide their smiles

There is no doubt that the **Damon system** is a very powerful and effective in treating all malocclusion and achieving a beautifully natural smile, but it can also be very efficient when you use the right protocols and blend it with the advanced technologies we have today. This is beautifully clear when you consider how gummy smile and open bite are the 2 faces of the same coin, and how mastering the protocol for dealing with one of them will be part of the treatment for the other. At **Borgan Academy** we spent the last year putting all my experience in treating gummy smiles in one course, and we will share with you in detail how to diagnose, plan and finish the treatment to get the celebrity smiles we all look for. From TADs placement to Gingivectomy using laser ... **no secrets are kept.**

STEP BY STEP TREATMENT PROTOCOL

THE COURSE HIGHLIGHTS

- › Treatment planning protocols for all of the different reasons behind Gummy smiles.
